Drake University Wesley Foundation

Ted Lyddon Hatten, the Director of the Wesley Foundation at Drake University in Des Moines, sent students out to explore the campus last December. Their assignment was to look for and photograph something they found hard to believe.

Later they gathered together to look at their photographs. One student explained her image of green grass and a barren tree like this, "I am from Minnesota. It is early December and I find it hard to believe that there is no snow on the ground." (Presumably, this student's belief was restored two days later when snow and ice blan-

keted the campus.)

Another student photographed the upper branches of the same tree. The background was a porcelain-blue sky streaked by a single vapor trail. He explained, "Physics is my major, and some people in my field look to the sky, to outer space, and say that it is an empty void. But I find it hard to believe that there is nothing out there."

To see is to interpret. To interpret is to believe. To see is to believe.
